

## Energy Savers

The way we use energy during the dog days of summer gives us several chances to use it wisely. Here are a few tips to help you gain greater control over your bill.

- Lowering your water heater temperature setting from 140° F to 120 F can reduce your water heating energy bill by more than 10 percent.
- Consider installing a programmable thermostat. It can be programmed to a preset schedule, so it saves you money and hassle. Check out NV Energy's mPowered program.
- Using a microwave can reduce your energy used for cooking by more than 50 percent and outdoor grilling is a great tool for keeping your home cool during the summer.

**Visit [nvenergy.com/save](http://nvenergy.com/save) for more energy saving tips.**

*Energy savings depend upon many factors. The costs contained in this article are based on estimates for a typical 1,800 sq. ft. home. Your actual savings in the cost of energy may be less than the estimates provided here if your house is a different size or if your energy usage is different from those assumed.*
