

LOCKED METERING FACILITY KEY BOX

1.0 PURPOSE

The purpose of installing a key box is to alleviate the problem of supplying and handling large numbers of keys for access to locked metering facilities in customer buildings.

The key box will enable authorized company personnel to enter locked facilities by means of a NVE key.

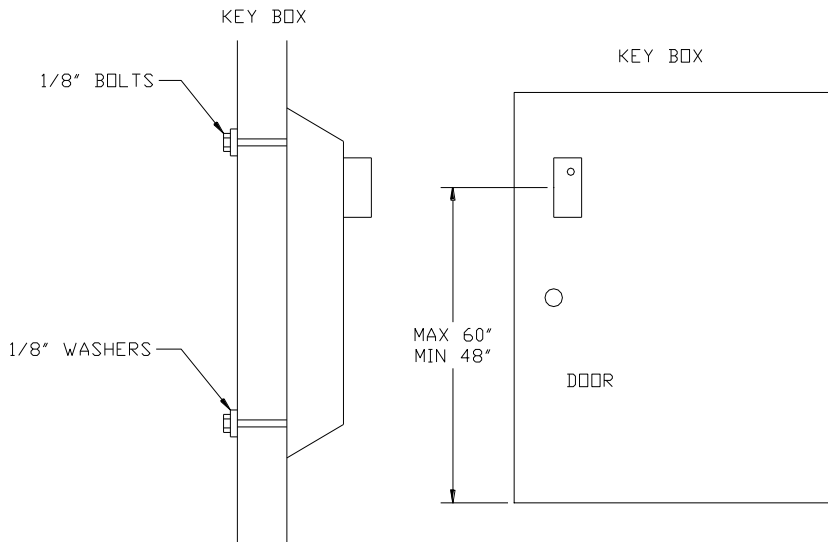

2.0 RESPONSIBILITY

It will be the responsibility of the developer/ owner to install and maintain a key box on each locked door and supply a key to the access door for each box. It will also be the responsibility of the developer/ owner to supply a new key for each box in the event locks on the doors are changed.

Key boxes (NVE Stock #95-0400) should be called for on any work order where metering access is an issue.

3.0 INSTALLATION

Key boxes are to be installed on every locked door to NVE metering facilities (electric, and gas). Boxes are to be securely mounted. A suggested secure mounting recommendation below.
