

Attention southern Nevada net metering customers:

On September 29, 2017, Nevada Power Company d/b/a NV Energy filed in Docket 17-07026 tariffs to include the NMR-405 Rider that takes effect December 1, 2017. Those tariffs and rates will be available online once approved by the Public Utilities Commission.

In the meantime, please refer to the bill insert **Southern NV Residential Rate Schedule** for current consumption rates. Effective September 1, 2017, net metering customers are billed the same rates as their otherwise applicable rate class and receive credit for their production in accordance with the Rider applicable at the time they took service. All customer generators currently taking service under NMR-A and NMR-G will also receive information notifying them of the option to move to the new NMR-405 Rider.

Please call Customer Service if you need additional assistance.
