

Energy Storage Programs

NV Energy now offers incentive programs to promote the installation of solar integrated energy storage systems. Energy storage systems can offset peak demand for electricity, help avoid investments by NV Energy in traditional generation assets and improve the reliability of the electric grid.

Energy Storage System Incentives

NV Energy incentives for storage projects are outlined in the table below.

Energy Storage Size	INCENTIVE AMOUNT
Less than 100 kW Residential with Time-of-Use Rate	Lesser of \$0.22 per Wh, 50% of project cost or \$3,000
Less than 100 kW Residential without Time-of-Use Rate	Lesser of \$0.11 per Wh, 50% of project cost or \$3,000
Less than 100 kW Non-Residential with Time-Of-Use Rate	\$0.15 per Wh
Less than 100 kW Non-Residential Without Time-Of-Use Rate	\$0.08 per Wh
100 kW to 1,000 kW Non-Critical Infrastructure	Lesser of \$0.30 per Wh, 50% of project cost or \$200,000
100 kW to 1,000 kW Critical Infrastructure	Lesser of \$0.40 per Wh, 50% of project cost or \$300,000

Critical Infrastructure

Installations for customers that provide critical infrastructure will be given priority for incentive awards. These include:

- Hospitals
- Airports
- Public safety facilities
- Public infrastructure and dams

Time-Of-Use (TOU) Rates

Time-of-Use rates let customers who are willing to use less electricity during peak demand periods save money by shifting their usage to times with lower rates. NV Energy offers a Guaranteed Lowest Rate for customers who choose to remain on a TOU rate for at least 12 months – so there is no risk in trying it out. If after the first 12-month period we find that you have spent more on the TOU rate than you would have spent on the standard rate, we will refund the difference and restore you to the standard rate (if you choose).

Program information and application details can be found at nvenergy.com/storage.
