

BOOST YOUR BOTTOM LINE WITH POWERSHIFT BY NV ENERGY

Energy savings are easier when you work with a PowerShift energy advisor. We'll give you expert advice and tell you how to increase energy efficiency and save money on projects including:

- New construction
- Major renovations or expansions
- Tenant improvements

NV Energy offers incentives for buildings that exceed energy code requirements by 5% or more. You can also take advantage of rebates when you work with us during the schematic stage of the project's design. To get started, contact a PowerShift energy advisor.

Qualifying Criteria

New construction incentives are available through three methods:

- **Prescriptive:** Incentives for lighting, HVAC, commercial kitchens, refrigeration and other measures
- **Performance-based:** A custom approach to determine the incentive for a qualifying individual item or system, such as a high-efficiency chiller
- **Whole building-based:** An LEED® certified project or a project designed to LEED standards and requirements; incentives are paid based on calculated annual energy savings

Because you can never save too much.

Rebate Structure

NV Energy bases its new construction incentive payments on a tiered structure:

- **Tier 1:** \$0 - \$100,000 = 100%
- **Tier 2:** \$100,001 - \$500,000 = 50%
- **Tier 3:** \$500,001 - \$1,000,000 = 20%
- **Tier 4:** \$1,000,001 and up = 10%

To reserve funding, submit a required pre-notification application along with:

- Drawings, equipment submittal, LEED submittal (if applicable)
- Estimated potential energy savings, including energy analysis, energy model, etc.
- Estimated construction completion schedule

Incentives are available on a first-come, first-serve basis until program funding is expended. Rebates are subject to change.

Energy-saving Project

PowerShift incentives and energy savings boosted the bottom line of a restaurant that installed energy-efficient interior, exterior and parking lot lighting, along with ENERGY STAR® commercial fryers, griddles, ice machines and refrigerators. Here's how:

- **Estimated annual kWh savings:** 38,743
- **Incentives received:** \$3,214

FUNDING IS LIMITED—APPLY TODAY!

Because you can never save too much.
