

SAVE ON VENDING MACHINE CONTROLS WITH POWERSHIFT BY NV ENERGY

NV Energy's commercial energy services offers a range of incentives for vending machine controls to help customers become more energy efficient and trim operating costs.

Refrigerated Beverage Vending Machines

ENERGY STAR® notes that new and rebuilt refrigerated beverage vending machines with the ENERGY STAR rating are 50% more energy efficient than standard machine models. New and rebuilt models incorporate energy-efficient compressors, fan motors and lighting systems to keep beverages cold and the machine well lit, all while using less energy.

They also come with a low-power mode option that allows owners to place the machine in low-energy lighting or low-energy refrigeration states during times of inactivity. These vending machines are estimated to save more than 1,500 kWh per year compared to non-qualified models.

Vending machine owners who install an ENERGY STAR Tier II refurbishment kit to upgrade an existing machine that does not meet the requirements of ENERGY STAR Tier II can qualify for an incentive of \$75 per kit.

Because you can never save too much.

Refrigerated Vending Machines Containing Non-perishable Food Items

Controllers for refrigerated vending machines that contain non-perishable food, limited to bottled and canned beverages, include a passive infrared occupancy sensor to turn off fluorescent lighting and the compressor when the surrounding area is unoccupied for 15 minutes or longer. The control logic periodically powers up the machine to maintain product temperature and for compressor protection.

An incentive of \$90 per controller is available for installing this type of energy efficiency control. A typical installation saves 1,600 kWh per year in annual energy savings.

Snack Machine Controls

NV Energy offers incentives for motion controls on non-refrigerated snack machines. The snack machine controller includes a passive infrared occupancy sensor to turn off fluorescent lights and other vending machine systems when the surrounding area is unoccupied for 15 minutes or longer. Customers who install snack machine controls can receive an incentive of \$15 per controller and expect annual energy savings of 387 kWh.
