

**Efficient Schools =
PowerShift Energy
Smart Schools**

PowerShift Energy Smart Schools is dedicated to helping Nevada's public schools and institutions of higher learning be energy smart. We are committed to helping schools reduce energy consumption and save money by implementing energy efficiency improvements in both new and existing construction.

Energy Smart Schools benefit from incentives for high-efficiency lighting, cooling and controls, while a custom-measure option allows for flexibility in choosing other energy-saving measures.

PowerShift Energy Advisors partner with schools in NV Energy's service territories to provide technical advice, benchmark energy use, formulate long-term plans to increase efficiency, evaluate specific opportunities and technologies, and calculate savings.

Typical projects include:

Lighting and occupancy sensors
Vending machine sensors
PC power management
Heating and air conditioning upgrades
Energy management systems

LED gym lighting
Window film
Set-back thermostats
Premium efficiency motors
Custom applications

Incentives are \$0.05 per first-year kWh savings for all projects and cannot exceed project costs. Pre-notification is required for all projects.

Funds are available Jan. 1 through Dec. 31, 2018, or until exhausted.

Andy DuMond, PowerShift Energy Advisor, will provide expert advice and help your school save energy and money.
