

2017 ENERGY SMART SCHOOLS

WHAT

NV Energy provides **technical guidance, design assistance** and **financial incentives** to help eligible schools identify and implement cost-effective energy efficiency upgrade projects.

WHY

The Energy Smart Schools Program is designed to help schools **save money on utility bills, improve comfort** and **protect the environment** through increased efficiency and reduced electrical energy consumption.

WHEN

The program year begins January 1 and runs through December 31, or until funds are exhausted (first come, first served).

HOW

To ensure maximum savings are achieved, qualified program representatives provide **technical guidance** and support. Services include energy benchmarking, effective technology selection and calculation of savings.

INCENTIVES

Incentives are \$0.05 per first-year kWh savings for all projects. Incentives cannot exceed project costs, and pre-notification is required on larger projects.

BY THE NUMBERS

Since the program's launch, every K-12 school district and all of Nevada's higher education campuses served by NV Energy have completed energy efficiency upgrade projects.

WHO'S ELIGIBLE

Public K-12 schools and institutions of higher education located in NV Energy's service territory are eligible.

TYPICAL PROJECTS

- Energy-efficient lighting and sensors
- Vending machine sensors
- Heating and air conditioning upgrades
- Window film
- Premium-efficiency motors
- LED gym lighting
- Energy management systems
- Set-back thermostats
- PC power management
- Custom applications
